

UniDict

UniDict takes advantage of the strengths of digital dictionaries to expand your linguistic horizons. Multiple dictionaries, multiple scripts, user glossaries, kanji definitions, radical building, built-in editor, Internet updating, text-to-speech reading, system-wide look up—all the features you would expect of a dictionary for the 21st Century.

Look up

Just select the word or reading you wish to look up and you are ready to perform a search across all the dictionaries you have installed. Search through the kanji dictionary for difficult characters with all their reading and code assignments. Use the unique "Kanji Constructor" to put together character from parts and radicals letting you look up characters you can do not know the reading of.

Add

Collect the latest versions of the dictionaries and entirely new special interest files from over the Internet. Keep your dictionary up to date with the latest words and phrases. Collect tens of specialist dictionaries available for free to create the fullest, most varied stock of translations on the planet.

Build

Build your original dictionaries and edit existing one to create your own file of entries. UniDict will build search Indices for you.

Extend and speak

Using Apple's Text-to-Speech, Contextual Menu and all the latest Mac OS features, UniDict is the most fully-featured Multilingual Dictionary Search Engine available. Have UniDict read aloud Japanese reading or definitions for you. Use AppleEvents to conduct searches from within other applications. With MacOs 8.0 and above you are able to search off any selectable text you can find.

System Requirements
